

This is a game for two or three players. You will need a 0-9 dice

Each player will need 22 counters of the same colour.

Throw the two 0-9 dice and add 7.

Place your coloured counter on total. If another player throws the same total, your counter can be bumped. You can make the number safe, by putting second counter on it (by throwing the total again).

The winner is the person with the most numbers with 2 counters on.
